

Vaccine data from Primary Care Electronic Extraction: July 2023

We have vaccination data on 8,126 different patients from 34 different practices.

There are 130,361 vaccination records. The most vaccine administrations recorded for an individual patient is 84, minimum 1, average 16 per patient.

Of the 34 practices, their participant count ranges from 8 to 1030, recording between 161 to 19,679 vaccinations.

Date Ranges

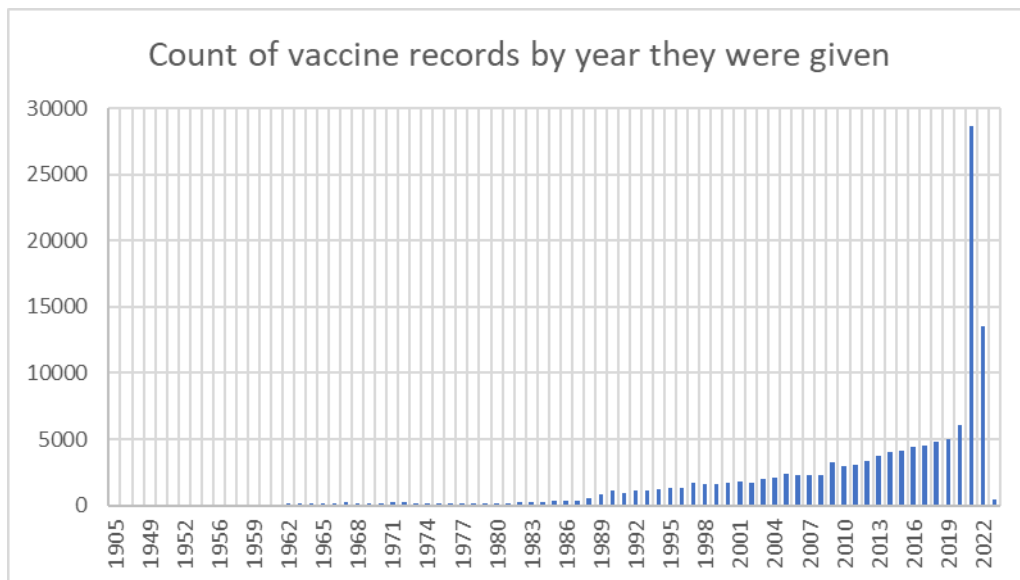

Date vaccine data was recorded - latest: 2023-04-08 05:32

Date vaccine data was recorded - earliest: 2003-06-16 00:00

Date latest vaccine actually given: 2023-04-06 14:50

The earliest vaccine administration recorded is 1905 which was supposedly an influenza vaccine(!), which was invented in 1938, so some of the dates are incorrectly entered.

However, the 1949 vaccination was recorded as smallpox, which is credible.

Vaccine Types

There are 55 different types of vaccination represented as shown in the table with the counts of each.

Vaccine type	Total vaccine count
INFLUENZA	54477
SARS-2 Coronavirus	29129
TYPHOID	6531
TETANUS	6300
HEPATITIS A	5993
DIPHTHERIA; POLIO; TETANUS	4352
PNEUMOCOCCAL	4229
POLIO	3634
HEPATITIS B	2929
VARICELLA-ZOSTER	2220
DIPHTHERIA; TETANUS	1362
HEPATITIS A; TYPHOID	1339
H1N1 Swine Flu	951
DIPHTHERIA; PERTUSSIS; POLIO; TETANUS	823
HEPATITIS A; HEPATITIS B	814
